

Case Managers & Social Workers

Sometimes a senior adult may need a little extra help at home. Home Companions Senior Care's goal is to simplify tasks and help seniors live where they feel comfortable – at home.

Transition and Stabilization

Some of the difficult parts of dealing with age are *changes*. Certain changes, such as a fall, stroke, moving to a new home, or the onset of a new condition can be detrimental to a patient's health if not handled correctly. Our services can be designed to provide extra care that specifically deals with managing and overcoming life changes. We can be there a few hours a week to around-the-clock care!

Home Companions Senior Care wants your patients not only to maintain physical health, but also social well-being. Whether it is a short shopping outing or a visit with friends or senior center, our team of home health aides can accompany your patients to enhance their self-esteem.

Disease-Specific Care Programs

Home Companions Senior Care offers specially "bundled" services that are designed to address limitations that are due to specific conditions such as Alzheimer's disease, arthritis, diabetes, cardiovascular disease, and cancer to name a few.

Patients CAN Afford Our Services!

- As a licensed home care provider, our services are often covered by a patient's health or long-term care insurance, VA benefits, and other payer sources. We will provide the necessary documentation for the client to file with their benefit provider.
- Often a family member will be paying the out-of-pocket cost for private services. And for the simple peace of mind that their love one is being cared for, our fees are affordable.
- We work with the client to create a schedule that balances their needs with their budget.
- With our wide range of services and schedule hours, we can provide the necessary care for a very affordable rate.

Note: We are a Medicaid Waiver provider
